Art Unit: 3652

1. The drawings are objected to because draftsman report mailed with the Office action of 8/7/03. A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

4. Claims 24-45 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ehrick, et al in view of Booth, Matsumoto, Neelly et al and Pickler.

Ehrick, et al discloses a substantially similar handling apparatus except that the piston is not double sided, there is no hopper structure, there is no expandable loader structure. Booth discloses the use of a double sided piston with hopper structure. Matsumoto discloses the use of a loader. Neelly et al and Pickler disclose the use of expandable loaders. It would have been obvious to a mechanic with ordinary skill in the art at the time the invention was made to provide these features to the primary

reference. The motivation is to provide for greater and faster compaction, and easier loading.

5. The remaining references are cited to show similar structure.

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Examiner Bratlie whose telephone number is (703) 308-2669. The examiner can normally be reached on Monday through Thursday from 6:30 to 5:00. Friday is the examiner's day off.
